# 1. INTRODUCTION

## 1.1. Welcome

Thank you for purchasing DVS-8504E, 4 channel, D1 H.264 Digital Video Server developed by CTC Union Technologies Company, Limited. For a better understanding, please read this manual before operating the DVS-8504E unit.

This installation guide provides instructions for installing the DVS-8504E Video Server on your network. To check for any product updates or latest release of the product User's Manual, please visit [www.ctcu.com](http://www.ctcu.com).

## 1.2. What is IP Surveillance?

IP-Surveillance is a term for a security system that gives users the ability to monitor and record video and/or audio over an IP (Internet Protocol-based) computer network such as a local area network (LAN) or the Internet. In a simple IP-Surveillance system, this involves the use of a network camera (or an analog camera with a video encoder/video server), a network switch, a PC for viewing, managing and storing video, and video management software.

Unlike analog video systems that use dedicated point-to-point analog cabling from the camera location to the viewing/recording station, IP-Surveillance (or network video) uses the IP network technology as the backbone for transporting information. In an IP-Surveillance application, digitized video and/or audio streams can be sent to any location, even around the world, if desired, via a wired and/or wireless IP network, enabling video monitoring and recording from anywhere with network access.

While an analog video system is for the most part a one-directional signal carrier that ends at the recording device, a network video system is bi-directional (allowing information to be sent and received) and can be an integrated part of a larger, scalable system. A network camera, for instance, can send video and audio to a user, as well as receive from the user audio and data instructions that could, for example, activate doors or external alarms. In addition, a network video system can communicate with several applications in parallel and perform various tasks such as detecting motion or sending different streams of video. Such a system provides for greater performance possibilities and flexibility.

### 1.3. IP Surveillance Benefits

The benefits of digital surveillance are many. At the camera level, the scalability of an IP-based system grows from a single camera to thousands in single unit increments, compared with 16-camera or channel steps for DVR or PC-based systems. In addition, any camera can be provided with any frame rate at any time, and frame rate and storage capacity can be increased simply by adding hard drives and PC servers. Moreover, IP allows "intelligent" functionality of camera, such as motion detection, sensor input, relay output and alarm triggering or even advanced intelligence like 'object left' or 'object missing'. Faster system integration allows one network that controls audio, video and data with remote accessibility of live or stored video streams from any location with increased reliability through real-time management software.

### 1.4. Network Video Recording

IP-based systems employ an NVR (network video recorder) rather than a DVR. The NVR is a server, using software that receives video streams of all digital video sources or analog cameras from the network and stores the content on a hard disk. Because they are IP based, Network Video Recorders can be managed remotely via a LAN or over the Internet giving greater flexibility. Capable of recording at super high resolutions and at speeds of up to 480 pictures per second, the NVR offers unmatched versatility.

### 1.5. Quick Install Steps

Follow these steps to install the 8504E Video Server on your local network (LAN) :

1. Check the package contents against the list below.
2. Connect the Video Server. See page 10.
3. Set an IP address. See page 12 for information on the available methods.
4. Set the password. See page 10.
5. Connect with Internet Explorer.
6. Configure Video settings

## 2. TECHNICAL SPECIFICATION

### 2.1. Hardware Specification

Model name : DVS-8504E

Video compression : Dual-stream H.264 / Motion JPEG

Video Resolution : 1CH / D1 720x480(NTSC) / 720x576(PAL)  
2CH / 2CIF 704x240(NTSC) / 704x288(PAL)  
4CH / CIF 352x240(NTSC) / 352x288(PAL)  
QCIF 176x120(NTSC) / 176x144(PAL)

Operating system : Linux (embedded)

Video bit rate : 64K/96K/128K/192K/256K/384K/512K/640K/768K/1M/1.5M/2M

Video frame rate : 1~30 FPS

Video quality : 5 level (medium, standard, good, detailed, excellent)

Video input : 4, BNC, 75ohm, 1Vp-p

Video output : 1, BNC, 75ohm, 1Vp-p

Digital zoom : 4x

Audio compression : ADPCM, G.711

Audio input : 4 channel microphone in

Audio output : 1 channel line out

Ethernet : RJ45, 10BaseT/100BaseTX

Power input : 12VDC, 2A

Digital Input/Output : 4DI, 2DO

PTZ control : RS485

Local storage : 3.5" HDD \*1 (SATA-II)

### 2.2. System Requirement

If you use the unit, please check your PC hardware level.

PC Minimum System Requirement

Operating System	Microsoft Windows XP
System Memory	512MB (1GB recommended)
Video RAM	64MB (128MB recommended)
Others	Requires DirectX 9 preinstalled

## 3. HARDWARE AND SETTING

### 3.1. Package Contents

1. DVS 8504E video encoder
2. 12V Power Adaptor
3. CD (User Manual)
4. PTZ control cable

### 3.2. Overview : Front panel

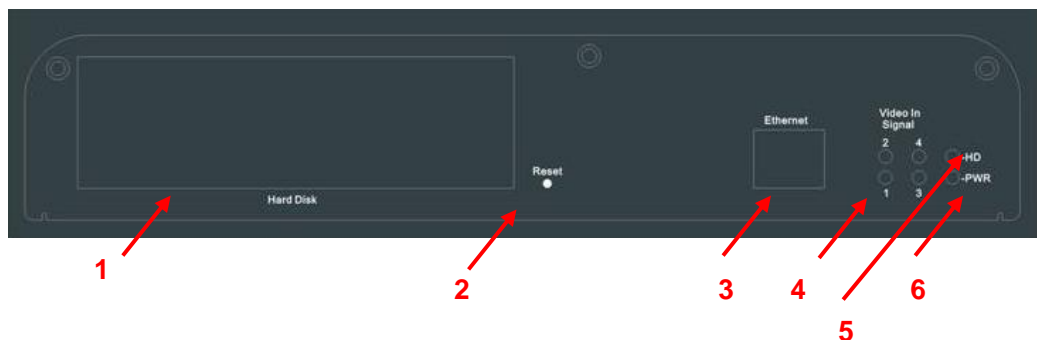

#### 1. Hard disk box.

Use 3.5" HDD to record at local site

#### 2. Reset button

Reset to factory default setting

- Press and hold the DVS 8504E front panel "Reset" button about 5 ~ 6 seconds and release. This will automatically restore factory settings.
- DVS 8504E default IP : 192.168.0.100
- If DVS 8504E is in DHCP environment, it will get IP address automatically.

#### 3. Network : RJ-45 connector

4. Video-in LED : Flash while video is working.

5. Hard disk LED : Flash while hard disk is reading or writing.

6. Power LED : Keep lighting while power on.

### 3.3. Overview : Back Panel

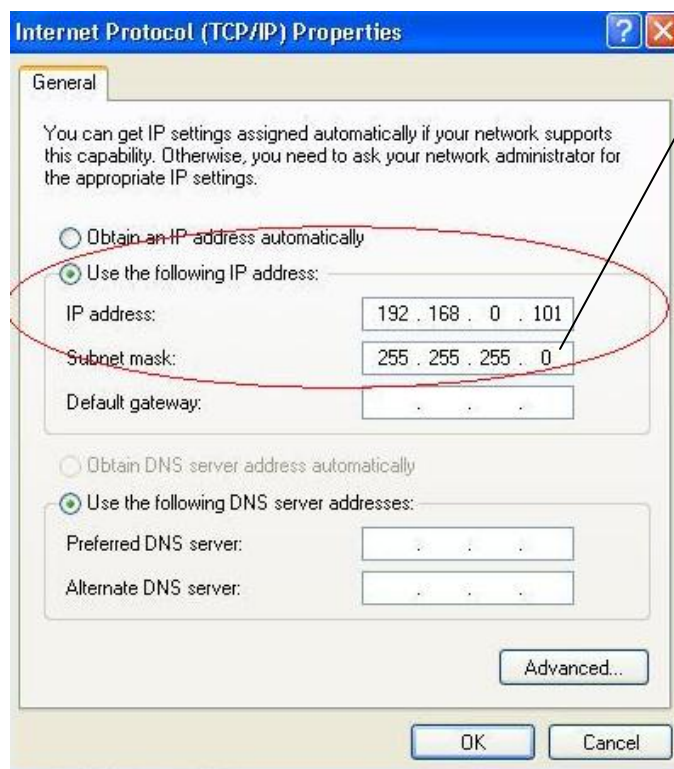

1. DI/DO. Please refer 7.2.2.1.
2. Audio out.
3. Audio in (x4)
4. Video in (x4)
5. Video out
6. PTZ control port. Please refer 7.1.1.
7. Power switch.
8. Power DC in.

## 4. HOW TO ACCESS UNIT

### 4.1. Default Setting

Connect the DVS-8504E with the computer through a UTP cable directly. Execute Internet Explorer browser (I.E. is the only supported WEB browser now). If there is a DHCP server in local LAN, please key-in the IP address from DHCP server on address bar. If not, please use the default IP “192.168.0.100” to access the device initially.

Please make sure the video server and your PC are on the same network segment before running the installation. Check it out in the TCP/IP setting in the “**Local Area Connection Properties**” of the DVS-8504E under the “**Network Connection**”.

Set up your LAN IP here as below:  
IP address: 192.168.0.XXX  
Subnet mask: 255.255.255.0

Note: XXX from 1 to 254, except the number that already assigned to the device. (Here it is 100)

When the connection is successful, the login page will show up in the I.E browser. The default username and password are both “**admin**”

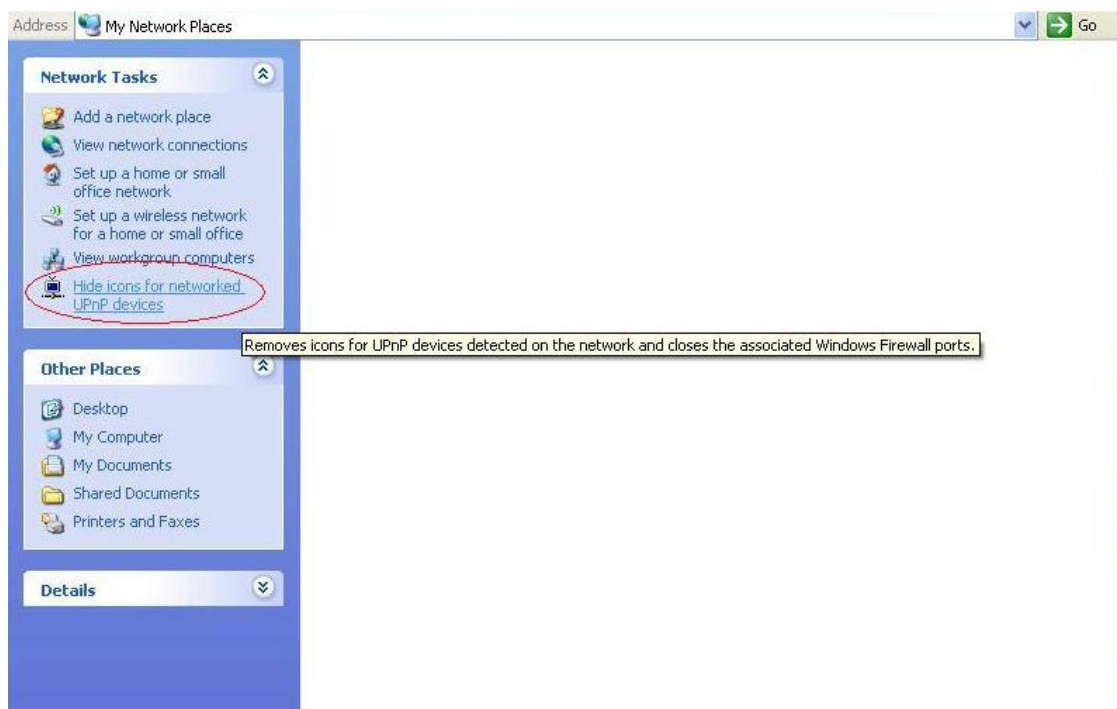

☐ **User Name:**

☐ **Password:**

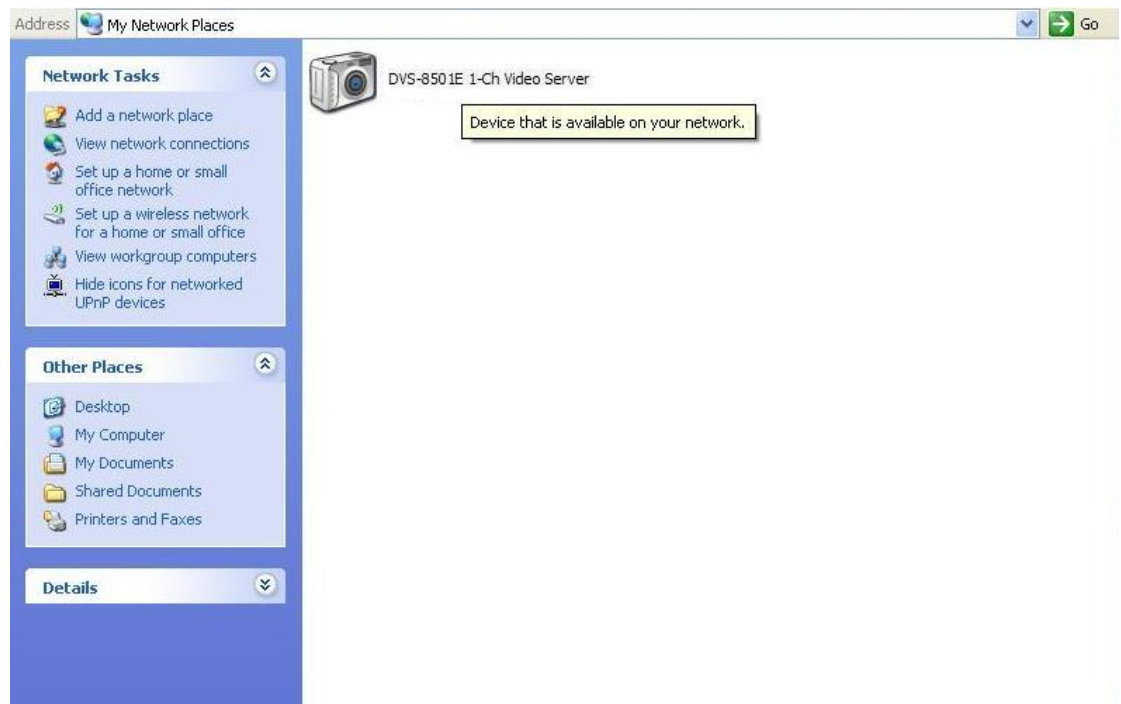

Note : Default username and password can be changed by clicking “Account” then clicking “Admin”

## 4.2. Windows UPnP

Open the Windows UPnP in “My Network Places” to show the detected UPnP devices normally. (Refer to the red circle in the below picture)

When the DVS is connected to the LAN properly, the Windows UPnP will show the corresponding icon in the list.

### 4.3. CTCU UPnP Finder

Besides Windows UPnP, CTCU UPnP Finder can also help detect the UPnP devices that are connected to the network.

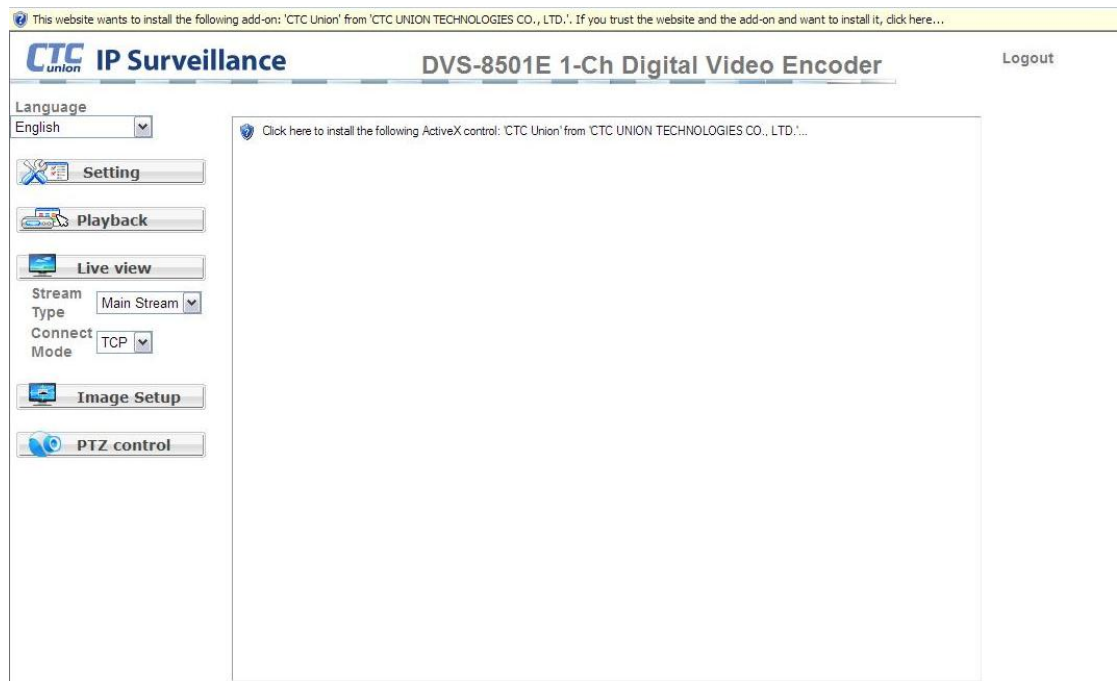

## 5. HOME PAGE SETTING

### 5.1. Live View

#### 5.1.1. ActiveX Installation

The first time the DVS is accessed through I.E. browser, users have to install the add-on ActiveX for the normal activation of the ActiveX viewer. Execute the I.E. and log in the DVS, users will find a slight yellow bar indicated the reminder of ActiveX installation. Click on the bar and allow the install.

After allowing the ActiveX download, a dialog will show up several seconds later. Click on "Install" to start the installation of the ActiveX.

**Note :** ActiveX is only supported in Microsoft Internet Explorer. If you use any other browser (Firefox, Chrome, etc.) to open the DVS configuration page, it will not be capable of displaying any video stream.

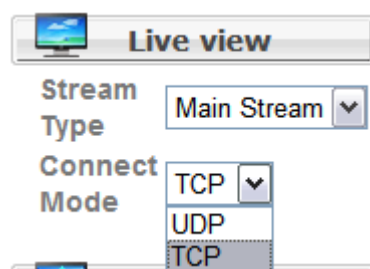

After the installation is completed, users are able to see the ActiveX Viewer interface. (Please refer to 5.1.4. ActiveX Viewer)

### 5.1.2. Main / Sub Streaming

Choose to watch "Main Stream" or "Sub Stream" here from the dropdown list. For Main Stream and Sub Stream set up, please refer to Chapter 6.3.

### 5.1.3. TCP / UDP Connection

Choose "UDP" or "TCP" connect mode here from the dropdown list

### 5.1.4. ActiveX Viewer

Above is the ActiveX viewer which will show up when users use I.E. Browser to access the video of DVS-8504E

### 5.1.5. RTSP Viewer Support

Users can also use other media player to play the RTSP stream. We recommend using VLC media player to watch the RTSP stream because VLC can support the H.264 video compression format. Users can freely download VLC player by logging on to VLC official website [http :  
//www.videolan.org/vlc/](http://www.videolan.org/vlc/)

## 5.2. Image Setup

Move the slider to setup brightness, contrast, saturation, and hue. Click on the "Default" button to go back default setting.

## 5.3. PTZ Control

Click these directional buttons to control PTZ camera.

Click "Set" to add a camera preset point. Click "Go" to direct camera to preset points.

Click "Set" to select patrol mode. Click "Go" to patrol. Before using this feature, please go to "Setting" → "Advance" → "Patrol" to set the patrol mode.

Adjust camera focus.

Adjust camera zoom in or out.

Please refer to Chapter 7.1 for detailed PTZ control set up.

## 5.4. Playback

Look up recorded video by channel, event, and period time.

☐ Event All Event ▾

☐ Start Time  
2009 / 9 / 29 17 : 29 : 37

☐ End Time  
2009 / 9 / 30 17 : 29 : 37

Index	Stream Type	Event Name	Start Time	End Time	File Time Span
<input type="radio"/>					
<input type="radio"/>					
<input type="radio"/>					
<input type="radio"/>					
<input type="radio"/>					

URL

Selecting the event, setup the demand period, and then click on “Query”. Users can get the video record that fits the search condition for playback.

## 6. BASIC SETTING

There are four settings in this sub-menu, including “System”, “Work mode“, “Channel parameter” and “Network”

### 6.1. System

#### 6.1.1. System Information

This page includes information on “Product name”, “Firmware Version”, and “Hardware version”.

The screenshot displays the CTC IP Surveillance web interface. The top header includes the CTC logo, the text "IP Surveillance", the device model "DVS-8504E 4-Ch Digital Video Encoder", and a "LOGOUT" link. On the left is a navigation menu with options: Home, Setting, Basic, System, System Inform., Date/Time, Initialize, Work Mode, Channel Parameter, Network, Advance, and Account. The "System" menu item is expanded, showing "System Inform." as the selected option. The main content area displays three fields: "Product Name" with the value "DVS8504E", "Firmware Version" with the value "Uboot:V1.1.4/Kemel:Linux2.6.23/App:2008-10-24 V1.1304", and "Hardware Version" with the value "2008-10-24".

Field	Value
Product Name	DVS8504E
Firmware Version	Uboot:V1.1.4/Kemel:Linux2.6.23/App:2008-10-24 V1.1304
Hardware Version	2008-10-24

## 6.1.2. Date/ Time

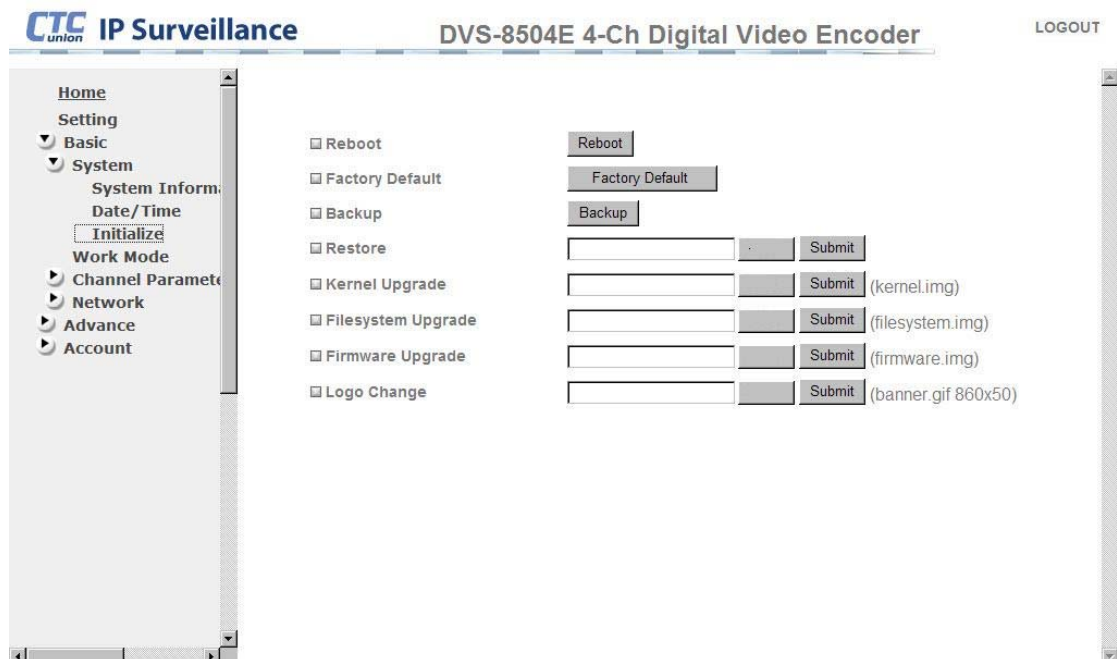

The screenshot displays the 'Date/Time' configuration page of the DVS-8504E 4-Ch Digital Video Encoder. The left sidebar contains a navigation menu with the following items: Home, Setting, Basic, System, System Information, Date/Time (selected), Initialize, Work Mode, Channel Parameters, Network, Advance, and Account. The main content area is titled 'DVS-8504E 4-Ch Digital Video Encoder' and includes a 'LOGOUT' link. The configuration fields are as follows:

- Current Time:** 2000-11-05 18:16:56
- PC Time:** 2008-11-05 18:16:56
- Date Time Format:** yyyy-mm-dd hh:mm:ss
- Adjust:**
  - ☐ Keep Current Time
  - ☐ Synchronize with PC
  - ☐ Manual Setting
  - ☒ Synchronize with NTP
- NTP Server:** pool.ntp.org (with an 'Auto' checkbox)
- NTP Interval:** 2 Hour
- Timezone:** GMT+08:00/Asia/Beijing/Hong\_Kong/Taipei

At the bottom of the main content area are 'Submit' and 'Cancel' buttons.

- **Current time :** Shows the current time of this device.
- **PC Time :** Shows the current time of controlling PC.
- **Date Time Format :** Select the display format for time. For example :  
yyyy-mm-dd hh : mm : ss (Year - Month - Day Hour : Minute : Second)
- **Adjust :** Four ways to update server time.
  - Ⓐ **Keep Current Time :** Remain device current time.
  - Ⓑ **Synchronize with PC :** Synchronize with controlling PC
  - Ⓒ **Manual Setting :** Select this mode to manually adjust the date and time of this device.
  - Ⓓ **Synchronize with NTP :** Refresh interval to synchronize the date and time of this device with those of the time server, known as NTP (Network Time Protocol) server.
- **NTP Server :** Input NTP server name or IP address. No more than 64 characters.
- **Time zone :** Choose time zone and time difference from Greenwich Mean Time in the area where the device is installed from the pull-down box.

### 6.1.3. Initialize

- Reboot : Click this button to reboot the device.
- Factory default : Click this to get back factory defaults. After reset, server will reboot automatically.
- Backup : Click to save a config file on PC.
- Restore : Click to restore a config file from PC to server. All settings can be restored to a previous state.
- Kernel upgrade : Click to upgrade device kernel.
- File system upgrade : Click to upgrade device file system.
- Firmware update : Click to upgrade firmware.
- Logo update : Click to change homepage logo. Please use 850x50 gif formats to replace old one.

## 6.2. Work mode

The screenshot shows the web interface for the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. The page title is "DVS-8504E 4-Ch Digital Video Encoder" and there is a "LOGOUT" link in the top right corner. On the left is a navigation menu with the following items: Home, Setting, Basic, System, System Information, Date/Time, Initialize, Work Mode (highlighted), Channel Parameters, Network, Advance, and Account. The main content area is titled "Work Mode" and contains the following settings:

- Video Format:** Radio buttons for NTSC (selected) and PAL.
- Stream Port:**
  - RTP Port:** Text input field with "8090" and a range "(1024 ~ 65535)".
  - RTCP Control Port(SSL):** Text input field with "8091".
- Resolution:** A pull-down menu currently showing "D1".
- Choose Channel:** Checkboxes for channels 1, 2, 3, and 4. Channel 1 is checked.

At the bottom of the settings are "Submit" and "Cancel" buttons.

### 6.2.1. Video format

Video format : One of two formats can be selected. NTSC or PAL

### 6.2.2. Steam Port

RTP Port : Input RTP protocol port. User can use software which supports RTP steaming to watch video. (Range 1024 ~ 65535)

RTCP control port (SSL) : Input RTCP protocol port. User can use software which supports RTCP steaming to watch video.

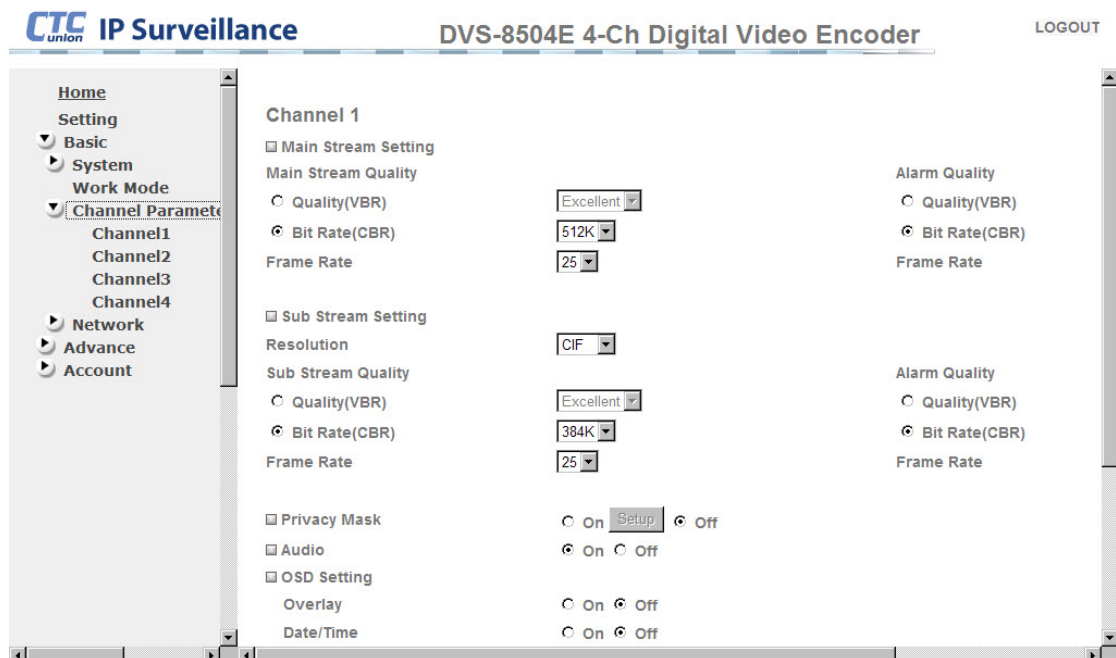

### 6.2.3. Resolution

Resolution : Click pull-down menu to choose resolution.(CIF,D1 or 2CIF)

Choose channel : Click checkbox to choose channel. Supports four channels in CIF. Supports two channels in 2CIF. Supports only one channel in D1.

## 6.3. Channel parameter

There are four channels support in this setting. Each channel has an independent setting page.

### 6.3.1. Main stream setting

Main stream quality : VBR (Variable bit rate) – Bit rate is variable depending on video quality.

CBR (Constant bit rate) –Fix video bit rate.

Frame rate : Set picture transferred per second. Maximum is 25 frames in PAL mode or 30 frames in NTSC mode.

Alarm Quality : All parameter are the same above.

### 6.3.2. Sub stream setting

Sub stream setting : All parameter have same meaning as with main stream.

### 6.3.3. Privacy mask

Privacy mask : To activate select “on”, and then click “setup”. This will hide the selected region from normal view.

#### **6.3.4. Audio**

Audio : Turn on or off audio.

#### **6.3.5. OSD Setting**

OSD (On screen display) setting :

Overlay : Turn on or off overlay text.

Date time : Turn on or off date stamp shown on screen.

Text color : Choose OSD text color.

Background color : Choose background color of OSD.

Alias : Channel alias

Display position : Text display position on screen.

## 6.4. Network

### 6.4.1. Network Information

- MAC address : Shows the device MAC address.
- Automatically(DHCP) : Set device to DHCP client mode
- Manual : Manually set IP, subnet and default gateway.
- DNS Server
  - Auto : Get DNS server IP automatically via DHCP.
  - Manual : Set DNS IP manually.
  - Primary DNS : Input primary DNS server IP address here.
  - Secondary DNS : Input secondary DNS server IP address here.
- HTTPS Port : Set to connect by default https port 443 or range 1024~65535
- HTTP Port : Set to connect by default http port 80 or range 1024~65535
- Client Port : Define client device connect to encoder by which port.
- AV Port : Port of video service stream. 6789, or set manually (range 1024~65535) .

## 6.4.2. PPPOE

Set to connect to Internet by PPPoE.

- IP address : Read-only. IP address from PPPoE service.
- Username ID : PPPoE username ID. Usually get from ISP.
- Password : PPPoE authentication password. Usually get from ISP.
- DNS Server
  - Automatically : Get DNS IP automatically.
  - Manually : Set DNS IP manually.
  - Primary DNS : Input primary DNS server IP address here.
  - Secondary DNS : Input secondary DNS server IP address here.

### 6.4.3. DDNS

This allow device to have DDNS domain name. Encoder will notify a dynamic domain name server to change mapping IP in real time (ad-hoc), the active DNS configuration of its configured hostnames, addresses or other information.

The screenshot shows the web interface of the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. On the left is a navigation menu with options: Home, Setting, Basic, System, Work Mode, Channel Parameters, Network (selected), Network Information, PPPOE, DDNS, UPNP, SNMP, HTTPS, IP Notification, Advance, and Account. The main content area is titled 'DDNS' and has radio buttons for 'On' (selected) and 'Off'. Below this are input fields for 'Server Name' (a dropdown menu showing 'http://members.dhs.org'), 'User ID', 'Password', 'Re-type Password', and 'Host Name'. At the bottom of the form are 'Submit' and 'Cancel' buttons.

- Server name : Select a DDNS server from Pull-down menu.
- User ID : Input DDNS ID for DDNS server.
- Password : DDNS authentication password.
- Host name : Hostname which is registered on DDNS server.
- Note : Before using this function, please register an account from DDNS service provider.

#### 6.4.4. UPnP

UPnP helps user to find this machine easily. It will open service ports on local LAN UPnP router. It allows easier access to this device from the Internet.

The screenshot shows the web interface of the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. The left sidebar contains a navigation menu with the following items: Home, Setting, Basic, System, Work Mode, Channel Parameters, Network, Network Information, PPPOE, DDNS, UPNP, SNMP, HTTPS, IP Notification, Advance, and Account. The main content area is titled 'UPnP' and features a radio button to toggle UPnP between 'On' and 'Off'. Below this is a checkbox labeled 'Turn On UPnP Port Forwarding', which is currently checked. There are four input fields for port numbers, each with a default value and a range in parentheses: 'HTTP Port' (80, 1024 ~ 65535), 'SSL Port' (443, 1024 ~ 65535), 'H.264 Port' (0, 1024 ~ 65535), and 'H.264 SSL Port' (0, 1024 ~ 65535). At the bottom of the form are 'Submit' and 'Cancel' buttons.

- HTTP port : HTTP connected port. Use the default 80 or set manually (range 1024~65535)
- SSL port : Https security connection port setting. Use the default 443 or set manually. (range 1024~65535)
- H.264 port : Set video stream port (range 1024~65535)
- H.264 SSL port : Input security connection port (range 1024~65535)

### 6.4.5. SNMP

Simple Network Management Protocol (**SNMP**) is a widely used protocol for monitoring the health and welfare of network equipment.

7	<input type="text"/>	<input type="text"/>	Read-Write
8	<input type="text"/>	<input type="text"/>	Read-Write

- Manager IP : Input SNMP manager's IP address.
- Community string : Input SNMP community string to communicate with SNMP manager.
- Access : Let user “read” or “read and write” on device.

### 6.4.6. HTTPS

Https is a URL scheme used to create a secure HTTP connection. It is syntactically identical to the http : // scheme normally used for accessing resources using HTTP. Select “on” to start to setup.

- Create & install : Click “create self-signed certificate” to create a certificate
- Installed Certificate Subject Name : show or remove certificate.
- HTTPS connection policy : Three policies can be choosing. (HTTP, HTTPS, HTTP&HTTPS)

### 6.4.7. IP Notification

Notify user by E-mail, when device is using a new IP. Select “on” to turn on.

## 7. ADVANCED SETTING

### 7.1. PTZ Setting

#### 7.1.1. PTZ Connector

8504E PTZ Pin assignment allocation (DB9)

No.	Definition	Color
1	X	X
2	RS-232 TX	Yellow
3	RS-232 RX	Green
4	RS-422 TX +	Blue
5	GND	Purple
6	RS-485(B)/ RS-422 RX -	Brown
7	RS-485(A)/ RS-422 RS +	White
8	RS-422 TX -	Black
9	X	X

#### 7.1.2. PTZ Control

This page lets user setup PTZ parameters.

The screenshot shows the 'PTZ Control' configuration page in the DVS-8504E web interface. The left sidebar contains a navigation menu with 'Advance' selected, and 'PTZ Control' highlighted. The main panel shows settings for Channel 1. The settings are as follows:

Parameter	Value	Range
Channel Switch	1	
Connection Type	RS485	
Protocol	Pelco-P	
Baud Rate	9600	bps
Camera ID	1	0~255
Pan Speed	25	0~63
Tilt Speed	25	0~63
Zoom Speed	1	0~3
Focus Speed	1	0~3
Iris Speed	50	0~100
Auto Pan Speed	50	0~100

At the bottom of the settings area are 'Submit' and 'Cancel' buttons.

- Channel Switch : Select one channel to start to setup.
- Connection type : Select connection type according to interface.
- Protocol : Select camera protocol. Please refer to user manual of camera.
- Pan Speed : PTZ camera pan speed (range 0~63).
- Tilt Speed : PTZ camera tilt speed (range 0~63)

- Zoom speed : PTZ camera zoom speed (range 0~3)
- Focus speed : Focus speed of camera (range 0~3).
- Iris speed : Adjust Iris speed of camera (range 0~100)
- Auto Patrol speed : Adjust auto patrol speed (range 0~100)

### 7.1.3. Preset Position

Setup preset position of PTZ camera on each channel.

Steps :

- Select channel you want to setup.
- Select preset number which you want to setup. There are 32 available parameter locations.

Write down position name and click “Set”

Click “Position set panel”, a new PTZ control window will appear.

“Start position”(home position). Choose a position name for home position from pull-down menu. “Clear all” will clear all positions you have set.

- Remember to click “Submit” after making any changes.

### 7.1.4. Patrol

This page let user setup a patrol mode for the camera. Every channel has four patrol routes. Every route can consist of 8 preset points. Camera lens will move in order to the end.

The screenshot shows the 'Patrol' configuration page in the DVS-8504E web interface. The sidebar on the left contains a tree view of settings, with 'Patrol' selected. The main area contains the following controls:

- ☐ Channel switch: 1 (dropdown)
- ☐ Set as default route: 1 (dropdown)
- ☐ Tour index: 1 (dropdown) | Tour name: [text field] | ☒ Enable ☐ Disabled
- ☐ Interval: 0 (text field) sec
- ☐ Tour positions setting: Order (dropdown) | ddd (dropdown) | [Setup] [Clear] [Clear all]
- 10 numbered input fields for preset points (1-10).
- [Submit] [Cancel] buttons at the bottom.

- Channel switch : Choose channel to setup
- Set as default route : Choose a route number
- Tour index : Show the route number you are setting now.
- Tour name : Give a name for this tour.
- Interval : Stop time on each preset position.
- Select preset point, click “setup” to put it on the preset route.
- Remember to click “Submit” after any changes.

## 7.2. Alarm Configuration

### 7.2.1. Alarm Receiver Setting

#### 7.2.1.1. FTP client

FTP client will send image files while alarms occur.

#### 7.2.1.2. FTP General Setting

The screenshot shows the 'FTP General Setting' page of the DVS-8504E 4-Ch Digital Video Encoder. The sidebar on the left contains a navigation menu with the following items: Home, Setting, Basic, Advance, PTZ Control, Preset Position, Patrol, FTP Client, SMTP, SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Cover, System Log, HDD Management, Local Recording, Alarm Local Reco, Event Remote Stc, Event Managemer, and Account. The main content area displays the 'FTP General Setting' form. It includes a checkbox for 'FTP General Setting' (checked), a 'Server Name' text field, a 'Port' text field with the value '21' and a range '(0 ~ 65535)', a 'User Name' text field with the value 'admin', a 'Password' text field with masked characters '••••', a 'Passive Mode' section with radio buttons for 'On' and 'Off' (selected), and an 'Attached File Type' section with a checked checkbox for 'JPEG'. At the bottom of the form are three buttons: 'Submit', 'Cancel', and 'Test'.

- FTP General Setting : Turn on or off this feature.
- Server name : Input FTP server name or IP address. °
- FTP port : Input FTP server port, default is 21 (range 0~65535)
- User name : Input user name of FTP server.
- Password : Input password of FTP server.
- Passive Mode : If you are connecting to an FTP server with passive mode, please turn this on. Leaving off will connect with Active mode.
- Attached File Type : Click here to send "JPEG" file to FTP server.

### 7.2.1.3. Periodical Sending

Send images file to FTP server periodically.

- Image File Name : File name for sending to FTP server.
- Suffix : Suffix of sent file.
- Interval : Choose time interval for sending-files
- Channel Switch : Choose active channel here.

#### 7.2.1.4. SMTP

SMTP or Simple Mail Transport Protocol lets this device send image files to specific E-mail addresses.

#### 7.2.1.5. General

The screenshot shows the web interface for the DVS-8504E 4-Ch Digital Video Encoder. The page title is "CTC IP Surveillance" and "DVS-8504E 4-Ch Digital Video Encoder". On the left is a navigation menu with options: Home, Setting, Basic, Advance, PTZ Control, Preset Position, Patrol, FTP Client, SMTP (selected), General (selected), Periodical Sendin, SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Cover, System Log, HDD Management, Local Recording, Alarm Local Reco, Event Remote Stc, Event Managemer, and Account. The main content area is titled "SMTP" and contains the following settings:

- ☒ SMTP: ☒ On ☐ Off
- SMTP Server:
- SMTP Server Port: ☒ 25 ☐ 465 ☐ 587 ☐ 25 (1024-65535)
- Authentication: ☐ On ☒ Off
- Receiver 1 Mail Address:
- Receiver 2 Mail Address:
- Receiver 3 Mail Address:
- Receiver 4 Mail Address:
- Receiver 5 Mail Address:
- Sender Mail Address:
- Attached File Type: ☐ JPEG
- Subject:
- Message:

- SMTP : Turn this feature on or off.
- SMTP Server : Input the SMTP server IP address
- SMTP port : Use default SMTP port or user-defined (range 1024~65535)
- Authentication : Select authentication type according to your SMTP server.
- Receiver mail address : There are five receivers acceptable.
- Sender mail address : Used as mail "from" address.
- Subject : Mail subject
- Message : Mail text

### 7.2.1.6. SMTP Periodical Sending

Send image files to specific E-mail address periodically.

The screenshot shows the web interface for the DVS-8504E 4-Ch Digital Video Encoder. The left sidebar contains a menu with options: Home, Setting, Basic, Advance, PTZ Control, Preset Position, Patrol, FTP Client, SMTP, General, Periodical Sending (highlighted), SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Cover, System Log, HDD Management, Local Recording, Alarm Local Reco, Event Remote Stc, Event Managemer, and Account. The main content area is titled 'SMTP Periodical Sending' and includes the following settings:

- ☐ SMTP Periodical Sending: ☒ On ☐ Off
- Image File Name:
- Suffix: ☒ Date Time ☐ None
- Interval:  M (30-1440)
- Channel Switch: ☐ 1 ☐ 2 ☐ 3 ☐ 4

At the bottom right of the configuration area are 'Submit' and 'Cancel' buttons.

- SMTP Periodical Sending : Turn this feature on or off.
- Image File Name : Attached file name.
- Suffix : Select “Date Time” for image suffix or not.
- Interval : Periodical mail interval time (Minute). Range from 30 minutes to 1440 minutes.
- Channel Switch : Choose active channel here.

### 7.2.1.7. SMS

Send messages to mobile devices.

Submit Cancel

- Alarm local recording : Record video when alarm occurs. Choose channel(s) and main or sub stream for recording.

#### 7.2.4.2. Event Remote Store

Save video to remote video server when event occurs.

The screenshot displays the web interface for the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. On the left is a navigation menu with options: Home, Setting, Basic, Advance, PTZ Control, Preset Position, Patrol, FTP Client, SMTP, SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Cover, System Log, HDD Management, Local Recording, Alarm Local Reco, Event Remote Stc, Event Managemer, and Account. The 'Event Remote Stc' option is selected. The main content area is titled 'DVS-8504E 4-Ch Digital Video Encoder' and contains the following settings:

- ☐ Remote Storage: ☒ On ☐ Off
- ☐ IP address:
- ☐ Port:
- ☐ Stream Choice
  - Channel 1: ☒ Main Stream ☐ Sub Stream
  - Channel 2: ☒ Main Stream ☐ Sub Stream
  - Channel 3: ☒ Main Stream ☐ Sub Stream
  - Channel 4: ☒ Main Stream ☐ Sub Stream

At the bottom of the settings area are 'Submit' and 'Cancel' buttons.

- Remote Storage : Turn this feature on or off.
- IP address : Input remote video server's IP address.
- Port : Input remote video server's port here.
- Stream choice : Choose main or sub stream for remote recording.

## 7.3. Storage management

### 7.3.1. HDD management

The screenshot shows the web interface of the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. On the left is a navigation menu with options: Home, Setting (Basic, Advance, PTZ Control, Preset Position, Patrol, FTP Client, SMTP, SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Coverage, System Log, HDD Management, Local Recording, Alarm Local Recording, Event Remote Storage, Event Management), and Account. The 'HDD Management' option is selected. The main content area displays the following settings:

- ☐ HDD Information
  - Disk Size: 0 bytes
  - Used Size: 0 bytes
- ☐ Format
  - Format button
- ☐ Disk Management Strategy
  - Disk Full Strategy: ☐ Overwrite ☒ STOP Write
  - Hard Disk Capacity Alarm: 80%
  - Alarm Debounce Time: 5min
- ☐ Recorded File Span Time: 60min

At the bottom right of the settings area are 'Submit' and 'Cancel' buttons.

●HDD information : If there is a hard disk installed, the disk size and used size will show. If no disk is installed, both will show 0.

●Format : Click “Format” button to format the hard disk. All data will be erased.

●Disk Management Strategy :

Disk Full Strategy : “Overwrite” old data while hard disk is full. “STOP Write” hard disk while hard disk is full.

●Hard Disk capacity alarm : Send alarm while hard disk space reaches the set percentage.

●Alarm Debounce Time : Alarm duration.

●Recorded File Span Time : Makes video split into files of 15, 30, 45 or 60 minute segments.

## 7.4. Event Management

This function includes event setting, import and export.

### 7.4.1. Event Setting

The screenshot shows the web interface for the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. On the left is a navigation menu with options: Home, Setting (Basic, Advance), FTP Client, SMTP, SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Cover, System Log, HDD Management, Local Recording, Alarm Local Reco, Event Remote Stc, Event Management (selected), Event Setting, Event Report, Event Import/Export, and Account. The main area is titled 'Event Setting' and contains the following fields and options:

- Event**: A dropdown menu showing '1' and a 'Clear Event' button.
- Event Enable**: Radio buttons for 'On' (selected) and 'Off'.
- Event Name**: A text input field.
- Conditions**: A row of tabs: 'AND' (selected), 'OR', 'Begin Action', 'End Action', and 'Schedule'.
- Event List**: A list of checkboxes for selecting events:
  - ☐ None
  - ☐ All
  - ☐ CH1 LOSS
  - ☐ CH2 LOSS

Click "Report" to show a report for the chosen event index.

### 7.4.3. Event Import/ Export

All Event settings can be exported to a file. Also user can also import a previously saved event setting export or file from a different DVS for cloning.

The screenshot displays the web interface for the DVS-8504E 4-Ch Digital Video Encoder. The top navigation bar includes the 'CTC union IP Surveillance' logo, the device name 'DVS-8504E 4-Ch Digital Video Encoder', and a 'LOGOUT' link. A left-hand menu lists various configuration options: Home, Setting (Basic, Advance), PTZ Control, Preset Position, Patrol, FTP Client, SMTP, SMS, Alarm Input, Alarm Output, Motion Detection, Video Loss/Coverage, System Log, HDD Management, Local Recording, Alarm Local Recording, Event Remote Storage, Event Management (Event Setting, Event Report, Event Import/Export), and Account. The 'Event Import/Export' option is highlighted. The main content area contains two sections: 'Export' and 'Import'. The 'Export' section has a checkbox, a dropdown menu set to '1', and an 'Export' button. The 'Import' section has a checkbox, a dropdown menu set to '1', a text input field, a 'Browse' button, and a 'Submit' button.

Action:

- Export : Click "Export" to export an event file. Then, select "save as" to save on PC.
- Import : Click "Browse" to select a specific file to import.

## 8. ACCOUNT MANAGEMENT

### 8.1. Admin

Administrator's default username and password are both "admin". This page allows the administrator to change the password for administrator.

The screenshot displays the web interface for the CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder. At the top, the header includes the CTC logo, "IP Surveillance", the device model "DVS-8504E 4-Ch Digital Video Encoder", and a "LOGOUT" link. On the left, a sidebar menu shows "Account" selected, with "Admin" and "User" listed below it. The main content area is titled "Account Modify" and contains three input fields: "Old Password", "New Password", and "Re-type New Password". Below these fields are "Submit" and "Cancel" buttons.

Action:

- Input old password to verify changing and new password twice. Click the 'Submit' button.

## 8.2. User

The administrator can create up to nine more users and assign permissions under Account Management. Add or change normal user "User name", "Password" and limits of authority.

CTC IP Surveillance DVS-8504E 4-Ch Digital Video Encoder

9	2000/11/10 00:12:45	192.168.9.130	from local	ftp upload fail
10	2000/11/10 00:13:16	192.168.9.130	from local	ftp upload fail

The System Log holds a record of activity recorded by the operating system of the DVS. This log may be viewed on the DVS or it may be configured to send the log to a log server for centralized management.

- Remote Log : Send log to remote log server.
- Server IP : Input IP of remote log server
- Port : Remote Log Server port. (Range from 1024 ~ 65535)
- Current Log : Shows the DVS current log. When full, new data will overwrite the oldest data in the queue.

## 11. TROUBLE SHOOTING

*1) I can't seem to add the DVS video into the NVR live view. Attached is a screenshot of my NVR setting. Please check what am I missing?*

If you are using RTSP streaming, please make sure that you have chosen the Stream Mode in RTSP properly. (See attached picture). By the way, the 6789 port is for UDP stream. You also have to make sure that there is no firewall or network block concern if there is network device like NAT between the NVR and the DVS. Make sure you forward the port properly.

*2) In web browser playback, I can't fast forward the video. I dragged the slider, but nothing happens.*

Yes, we have found this problem in firmware V1.1532 which you have on hand. This problem didn't exist in the previous edition. We will fix it very quickly and provide you the updated firmware as soon as it is available.

*3) I can't find a way to backup video directly from the DVS local HDD onto my PC. I pressed the REC button in playback, it seems to start recording whatever is playback, but I tried to play the recorded file on VLC, nothing happens. Can I just copy the video from the DVS HDD to my PC, without waiting for the REC?*

The only way to back up the video now from the HDD is to push the REC button while doing the playback. The backup video needs to be transcoded to AVI format to be successfully played on the VLC player. Attached zip file is the tool software that you can use to transfer the back up video. We will provide a more efficient process to manage the video files in the HDD very soon.

*4) The email notifies me of motion detect, but there's no attachment. Is this normal?*

Please open the DVS page through I.E. Go to "Setting"-->"Advance"-->"SMTP"-->"General" to set up the email address. Make sure to check the "JPEG" box to send the attached file.

*5) Is there a way to store the video recording directly to a PC over SAMBA or NFS protocol?*

For SAMBA, although our DVS has embedded Linux, we put most of the CPU resource on the video encode and decode processes. You can understand it while you operate the DVS which brings the exceptional hardware encode capability. Therefore, the DVS-8504E so far cannot support either SAMBA or NFS protocol.

*6) How do I use the Live stream URL (rtsp : //ipaddress/live.mp)*

You have to use VLC media player to watch the video as VLC can support the H.264 format. Real player and Windows Media Player cannot support H.264 compression yet.

*7) What is Cell Threshold*

This parameter means the number of scan times in a period in the motion detection area. The higher the setting number is, the more scan is proceeding in a single period (It means more "Sensitive"). On the other hand, the lower the setting number is, the less scan is proceeding.

*8) What is Spatial Threshold*

This parameter means the image alteration rate inside the motion detection area. The higher the setting number is, the higher the threshold of the motion detection activation which means the harder the condition of motion detection will be sufficient.

*9) What is Debounce time*

It means during the setting time, all the motion detection detected will be treated as one detected event. For example, if you set it at the min. 20 seconds, there is one moving object trigger the motion detection event. In the following 20 seconds, even if there are other triggers in the same motion detection area, the user will receive the alarm only one time. This debounce time can prevent the user from receiving too many redundant alarms. After all, once the first motion trigger the alarm, the user can playback the video to check out the related image data around the trigger time.

*10) SMTP already set but received no email notification?*

You have to set up the SMTP server and Sender Mail Address under same source. That means, for example, if you set "smtp.gmail.com" in SMTP server, the Sender Mail Address has to be XXXXX@gmail.com. (XXXXX depends on the actual gmail account). Please kindly note that we suggest you choosing 456(SSL) port and check SSL under Authentication while using gmail as SMTP server.
